

## **50. Translation**

**1 unit, Heeseon An and Alban Ordureau, November 10, 2025**

1) Components needed for translation;

-mRNA

-tRNA

-ribosomes

-initiation, elongation, and termination factors

2) Roles of these players in ensuring accuracy during the initiation, elongation, termination and recycling steps of the translation process

3) Quality control:

-How defective mRNAs are detected by ribosomes

-Degradation of faulty RNA and incompletely translated protein product

-recycling of the ribosome components

4) Relationship between protein levels and mRNA abundance.

### **Discussion Paper:**
